

Aligner Care Instructions

Please read and follow these instructions carefully for the best treatment outcome.

1. Wearing Your Aligners

- Wear your aligners **20–22 hours every day**
- Remove only for eating, drinking, and brushing
- Move to your next set on the exact day your doctor has instructed — not before, not after
- Never skip a set — each aligner builds on the previous one

2. Eating & Drinking

- Remove aligners before every meal or snack — **no exceptions**
- You may drink **plain water** with aligners in
- No tea, coffee, cold drinks, or juices while wearing — they stain and warp the plastic
- Never eat with aligners in — it cracks them

3. Cleaning Your Aligners

- Rinse with normal water every time you remove them — never hot water (it warps the shape)
- Clean with a soft toothbrush — every morning
- **Never use toothpaste** — it scratches and makes aligners cloudy
- If required, soak in denture cleaning tablets (e.g. Corega) once a week for deep cleaning

4. Oral Hygiene

- Use interdental brushes to clean between teeth for best results
- Rinse with mouthwash before putting aligners back in

5. Storing Your Aligners

- Always store in the case provided when not wearing
- Never wrap in tissue — they get thrown away
- Keep away from heat — car dashboards, hot water, direct sunlight
- Keep away from pets — dogs chew aligners

6. What to Expect

- Mild soreness for 2–3 days when switching to a new set — completely normal
- Slight lisp in the first few days — goes away as you adjust
- Excess saliva in the first week (body assumes it to be food) — settles down on its own
- Aligners may feel tight when first inserted — that means they are working

7. What to Avoid

- Do not bend or force aligners in — insert with fingertips starting from front teeth
- Do not use coloured soaps or coloured mouthwash to soak — they stain

- Do not share aligners with anyone

8. Contact Us Immediately If

- An aligner cracks or breaks
- An aligner does not seat properly or feels completely wrong
- You lose an aligner
- You experience sharp pain (mild pressure is normal — sharp pain is not)
